

## Local Password Generator

When it comes to ensuring the security of our online accounts, having a **strong password** is paramount. While **visiting an online website to generate one** seem like a convenient choice, it can **pose potential risks to our security**. There's always a chance of these sites being malicious or vulnerable to hacking, jeopardizing our sensitive data.

To safeguard our online presence effectively, it is wiser to **generate passwords locally**. **This program can assist you in accomplishing this objective**. Moreover, it offers a **user-friendly graphical interface**, allowing you to use it effortlessly. Hope you like it :smiley:

### Environment

Use the package manager pip to install package customtkinter

```
pip install customtkinter
```

### Usage

1. Run `main.py`

```
python main.py
```

2. An graphical user interface should appear.
3. Select the desired format and generate the password

### Contributing

Pull requests are welcome. For major changes, please open an issue first to discuss what you would like to change.
